TRANSPAFIX

THE PROBLEM SOLVER

With TRANSPAFIX we offer to Tyre Service Shops a cost reducing quality Tyre Mounting Paste which simplifies the mounting of tyres.

By using TRANSPAFIX you will obtain a crystal clear high performance sliding film for a clean application without smear marks.

With its so far unknown high quality characteristics you solve your problems with TRANSPAFIX easily.

PROFIT OPTIMIZATION

Notably during the season when tyres are changed there is often no time to thoroughly remove the remainders of Tyre Mounting Paste and clean the soiled tyre side walls or rims. Besides it is necessary, with many mounting pastes of lower sliding qualities, that one has to additionally lubricate the tyre during mounting.

Especially by mounting of Low Profile Tyres and tyres with Run-Flat characteristics this problem is extremely detrimental and results in considerable extra work during mounting.

This extra work requires more use of ordinary mounting equipment as well as additional time of professional man power. Both is very expensive!

QUALITY OPTIMIZATION

In spite of considerable efforts the workman can not perform perfectly as should be and therefore has to send the customer in many cases "back on the road" with a dirty tyre, soiled by Mounting Paste. The professional cleaning would be too expensive. This is annoying for the customer and a general nuisance.

Particular raw materials and a special process technology during the production make TRANSPAFIX a superior solver of problems in the overall tyre mounting work.

YOUR ADVANTAGES

- ✔ superior sliding results, also for problem tyres.
- ✔ simplifies tyre mounting and protects the tyre of damages.
- ✔ is clean while using and easy to apply.
- ✔ extremely economical in consumption.
- ✔ minimal shrinkage while pail is open, no dry-out.
- ✔ the most reasonable mounting help compared to ordinary mounting pastes.
- ✔ generally to be used.
